

# Share code for digital tools & hold a boot camp to teach tools

---

This idea came into NARA via email. We are sharing it here in order to get feedback.

Does NARA have plans to share the mechanics of the innovation tools they're developing, such as the History Hub? What software did they use and how did they customize it? Or, more radically, would they share the code? Many of the tools are things the states (and I'm sure many others) would be interested in adopting, I'm sure, but it would help us if we knew how to begin. Maybe even a multi-day boot camp at NARA to see the tools and learn how they were developed? NARA is more innovative right now than I've ever seen it. Good job, folks!
